

## EUROHEALTHNET PROJECTS

*EuroHealthNet works in order to improve the health of European citizens by striving for a healthier Europe with greater health equity between and within countries. It does that by supporting projects and policy development together with its members and the EU institutions. All projects lead by EuroHealthNet are co-funded by the European Commission.*

### PROGRESS - The Equity Channel – Connecting People for Fair Health

[www.equitychannel.net](http://www.equitychannel.net)

The **EQUITY CHANNEL** brings together people and groups committed to addressing health inequalities and offers evidence on ways to best achieve this. The Equity Channel networking platform allows the exchange of information and expertise, the formulation of evidence-based policy recommendations and their dissemination among key decision-makers and stakeholders across sectors.

### HAPI - Working for Equity in Health

[www.hapi.org.uk](http://www.hapi.org.uk)

**WORKING FOR EQUITY IN HEALTH** aims to explore the relationship between work, worklessness and social protection as social determinants of health inequalities, with an asset based approach.

## EQUITY ACTION - Joint Action on Health Inequalities

[www.health-inequalities.com](http://www.health-inequalities.com)

The **EQUITY ACTION** represents a direct outcome of deliberations between interested Member States, international organizations, and the European Commission on how to deliver a structured programme of work on health inequalities. The challenge is to foster integrated action across governments and with a range of stakeholders to take action to address these inequalities. In particular, EuroHealthNet leads a working group focusing on regional approaches to tackling health inequalities and the use of EU Structural Funds at regional level to address health inequalities.

## GRADIENT - Applying Public Health Policies to Effectively Reduce Health Inequalities amongst Families and Children

[www.health-gradient.eu](http://www.health-gradient.eu)

EuroHealthNet coordinates **GRADIENT**, a collaborative research project involving 12 institutions (universities and public health institutes) and which aims to level up the health gradient among children, young people and their families by addressing early life policy actions, social capital and welfare policies in order to create equal opportunities.

## SPREAD - Towards Sustainable Lifestyles 2050

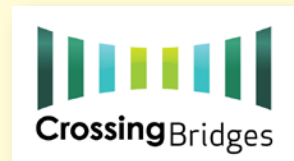

[www.sustainable-lifestyles.eu](http://www.sustainable-lifestyles.eu)

EuroHealthNet has a leading role in **SPREAD**, which aims at consolidating the existing knowledge experience and best practices on linking health and sustainable ways of living, moving and consuming and to provide a roadmap towards scenarios of sustainable lifestyles in 2050.

## CROSSING BRIDGES

[www.health-inequalities.eu](http://www.health-inequalities.eu)

**CROSSING BRIDGES** aims to advance the implementation of Health in all Policies (HiAP) approaches in EU Member States. It will contribute to the development of practical tools that are required to turn HiAP theory into practice, and to make progress on the implementation of HiAP in Europe. Within Crossing Bridges, thus, evidence led methods and targeted capacity building activities will be developed, as part of the overall mission to improve health equity within and between states.

If you have any queries, want to know more about our projects, please contact our Brussels office.
