

Main messages and recommendations for health and long-term care sector.

EuDr Lieve Fransen

Boosting Investment in Social Infrastructures

A proposal for a NEW DEAL for Europe

Dr. Lieve Fransen & Professor Edoardo Reviglio
Co-authors of report

Outline of presentation

1. Goals of HLTF and definition of social infrastructure;
2. Estimates of social infrastructure investments and gaps;
3. Changes to take into account for long-term investment
4. Recommendations for health and long term care
5. Structural fund/EIB/crowd- in private resources

Goals of the High Level Task Force

1. A critical contribution to **upward convergence and cohesion** between regions and countries in the EU
2. To assess how long- term investment in social infrastructure can be accelerated
3. To make proposals and recommendations

Defining Social Infrastructure

A subset of the infrastructure sector broadly defined as long-term physical and intangible assets in the social sectors.

The report focuses on :

- education/life-long learning,
- **health and long-term care** and
- affordable, accessible and energy-efficient housing.

Assessing Current Investment in Social Infrastructure

Poor available data on public and private investments

- € 65 billion annually for education & lifelong learning.
= 0.43% of GDP and 90% are public resources.
- € 75 billion annually for **health and long-term care**.
= 0.5% of GDP.
- € 28 billion annually for affordable housing.
= 0.2 % of GDP.
- **Grand total = € 170 Billion**

Investment **Gap** for Social Infrastructure (minimum)

Sector	Current investment €billion p.a.	Minimum Gap per sector €billion p.a.	Additional items €billion p.a.	Investment Gap €billion p.a.
Education & Lifelong Learning (0.43% of GDP)	65	15		15
Health & Long-Term Care (0.5% of GDP)	75	20	€50 billion p.a. for long-term care Unknown amount for disability and migrants	70 <u>(20+50)</u>
Affordable housing (0.4% of GDP)	28	7	€50 billion pa to address energy poverty	57
Totals	168	42	100	142

Current investment: € 170 bn per year (20% lower than 2009).
Additional need of € 150 bn per year or **€ 1.5 trillion** for 2018-
2030 or 3 times the amount of “Juncker plan”.

Infrastructure in health only part of the solution

- Financing of services, training, and human resources are representing the largest part of the costs in health and long term care .
- Freeing public/private resources used to modernise and invest in infrastructure can accelerate the development of integrated care models.

Life expectancy and **healthy** life expectancy at 65 in the EU-27 in 2015, by gender

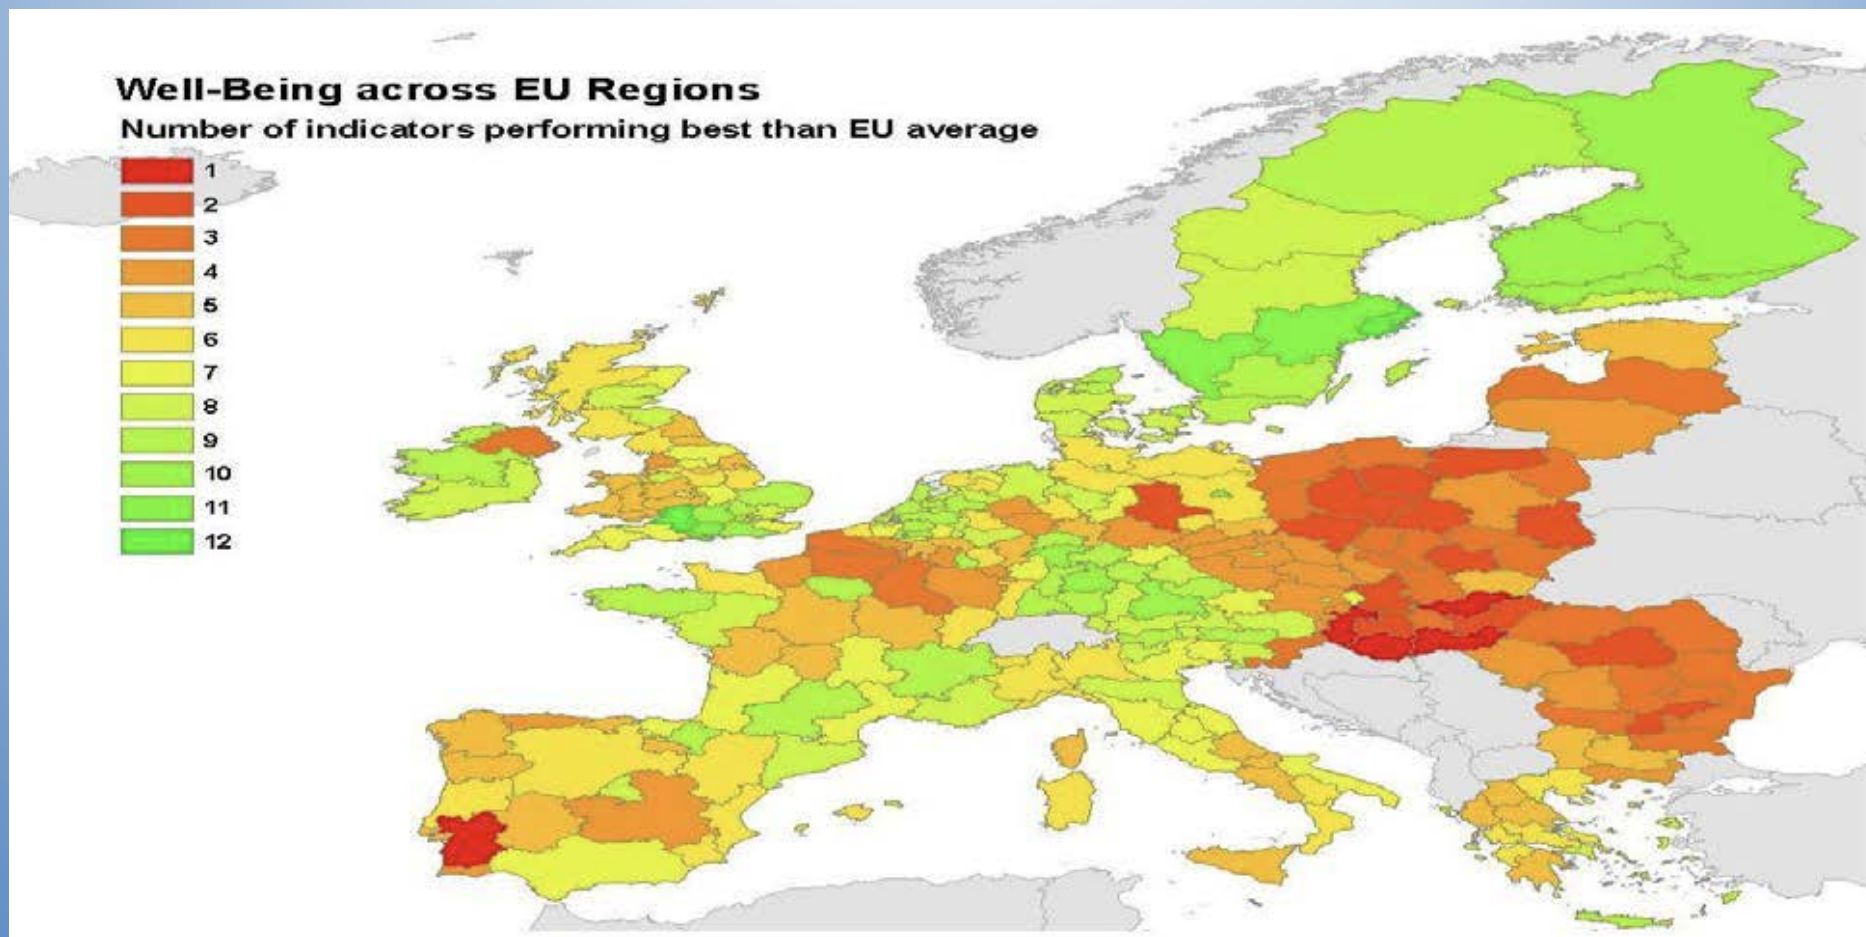

At 65 years old ,men are expected to live healthy for another 9.4 years and beyond that they might become less independent and live another 8,5 years.

	Total years life expectancy at 65, men	Healthy years Life expectancy at 65, men	Percentage of healthy life years life expectancy at 65, men	Total years life expectancy at 65, women	Healthy years life expectancy at 65, women	Percentage of healthy life years' life expectancy at 65, women
EU-27	17.9	9.4	53%	21.2	9.4	44%

Impact on independent living, accessible housing, health care for chronic co- morbidities /close to home

Mapping of distribution of well-being in EU-JRC policy report

Integrating technology to solve health challenges

- Digital technology is creating new spaces in healthcare. *Diagnostics ,treatment, monitoring, telehealth ,data and privacy*
- Digital technology has also reshuffled the delivery points of the various medical services, in a way that will create opportunities in de-centralised and near-person/patient products and services.

- Big data needs open data models while guaranteeing privacy
- Technology is not at the core of digital health—users are.
- Key digital health hubs around the world

Financing the welfare systems

(Re)productive age population group becomes relatively smaller

RECOMMENDATIONS & PROPOSALS

Boosting long-term investments
Bundling of projects
Blending of finances instruments
Building capacity and technical know how

Main Areas of Intervention:

- Increase **pipeline of large scale bankable projects for SI**
- Enhance the role of **national promotional banks and institutions (NPBIs);**
- Prioritise social infrastructure finance for the **regions with the highest needs;**
- Improve **Evidence-based Standard Settings for impact investing;**

Investment platforms

Thematic, regional or EU wide

- They crowd-in private investment
- - to finance projects with a higher risk profile or
- - to bundle projects or
- - to blend different sources of financing.
- - provide access to specialised advisory services

Practical guide to apply for social infrastructure projects

- ***How to apply for EIB/EFSI funding?***
- To benefit from EFSI resources and other financing deployed through the EIB, projects need to undergo the EIB [due diligence process](#). This process helps to verify if the project is eligible for EIB financing. If it is and the operational department proposes that it be backed by EFSI, it will be presented to the independent [Investment Committee](#) to decide on the use of the EU-guarantee.
- Following a positive outcome of the due diligence process, projects are submitted for approval by the relevant EIB Group Governing Bodies
- To submit their project, project promoters should follow the usual [EIB loan application procedures](#)

How to apply for advice from the European Investment Advisory Hub?

- The **European Investment Advisory Hub** offers 360 degree advisory and technical assistance and can help social infrastructure and social services projects get off the ground.
- EIAH services are available to both public and private project promoters for whom they have a differentiated pricing policy.
- **Public sector:** The Hub provides its services for free to the public sector.
- **Private sector:** EIAH advisers work directly with project promoters to prepare a tailor-made advisory package. If a project fulfils Hub's eligibility criteria, EIAH will proceed with the internal approval for technical resources and estimate a budget to be allocated to the advisory package. They then communicate the pricing that applies to the specific case.
